# Program Title: Student Allowance Checker  
# Description:  
# This program checks if a student's allowance is Low, enough, or high.
```

```
# =====  
  
# Display the title of the program  
print("Welcome to the Student Allowance Checker")  
print("-----")  
# Ask the user to enter their weekly allowance  
# input() is used to get data from the user  
allowance = input("Enter your weekly allowance: ")  
# try is used to test code that may cause an error  
try:  
# Convert the user input into a number  
# float() allows decimal values  
    allowance = float(allowance)  
# Check if the allowance is less than 500  
# if statement is used for decision making  
    if allowance < 500:  
        print("Your allowance is LOW.")  
        print("Try to budget your money carefully.")  
# elif checks another condition if the first is false  
    elif allowance >= 500 and allowance <= 1500:  
        print("Your allowance is ENOUGH.")  
        print("Manage your expenses wisely.")  
# else runs when all conditions above are false  
    else:  
        print("Your allowance is HIGH.")  
        print("You can save extra money.")  
# Display a closing message  
    print("Thank you for using the program!")  
# except runs if the user enters invalid input  
except:  
    print("Error: Please enter a numeric value only.")
