Run

```
1 # First i declare a variable x with a number of 7 to compute the final grade
2 x = 7
3 # Second i ask the user to input their grade on a specific Subject and used
  float and int to seperate the integer and the decimal.
4 math = int(input("ENTER YOUR GRADE IN MATH:"))
5 print ( "YOUR MATH GRADE IS: ", math)
6 english = float(input("ENTER YOUR GRADE IN ENGLISH:"))
7 print ("YOUR ENGLISH GRADE IS:" , english)
8 science = float(input ("ENTER YOUR GRADE IN SCIENCE:"))
9 print ("YOUR SCIENCE GRADE IS:" , science)
10 ap = float (input ("ENTER YOUR GRADE IN AP:"))
11 print ("YOUR AP GRADE IS:", ap)
12 mapeh = int(input ("ENTER YOUR GRADE IN MAPEH:"))
13 print ("YOUR MAPEHGRADE IS:" , mapeh)
14 tle = int (input ("ENTER YOUR GRADE IN TLE:"))
15 print ("YOUR TLE GRADE IS:" , tle)
16 esp = float (input ("ENTER YOUR GRADE IN ESP:"))
17 # Third i add their grade on a specific subject and i divide with 4 which is the
  variable x. I used the parenthesis to compute the addition first and proceed
  to the division
18 grade = (math + english + science + ap + mapeh + tle + esp) / x
19 #Lastly i print the final average to output it in the console
20 print ("YOUR FINAL AVERAGE GRADE IS:" , grade)
```

Output

Clear

ENTER YOUR GRADE IN MATH:90
YOUR MATH GRADE IS: 90
ENTER YOUR GRADE IN ENGLISH:98.6
YOUR ENGLISH GRADE IS: 98.6
ENTER YOUR GRADE IN SCIENCE:95.3
YOUR SCIENCE GRADE IS: 95.3
ENTER YOUR GRADE IN AP:90.6
YOUR AP GRADE IS: 90.6
ENTER YOUR GRADE IN MAPEH:90
YOUR MAPEHGRADE IS: 90
ENTER YOUR GRADE IN TLE:89
YOUR TLE GRADE IS: 89
ENTER YOUR GRADE IN ESP:90.5
YOUR FINAL AVERAGE GRADE IS: 92.0
